EV (ELECTRO-VOICE®) REINTRODUCES N/D367s VOCAL MICROPHONE AT WINTER NAMM

EV N/D367a Wired Microphone Features Smooth, Controlled Frequency Response

Anaheim, CA (January 16, 2003): EV (Electro-Voice®) is proud to announce the reintroduction of the N/D367a vocal microphone at Winter NAMM, Booth #6778. Due to continued interest and demand from dealers and customers, the N/D367a is being reintroduced at Winter NAMM. Unique to the marketplace as a microphone that performs like no other with the female voice, the N/D367a is once again available.

When exceptional performance is a must in demanding situations, the N/D367s is the mic of choice. A tight cardioid pick-up pattern, specially tailored frequency response, and unrivaled low handling noise put the nuances of any voice in front of the mix. With added sensitivity in the 1-2 kHz region and a smooth, controlled response above 2 kHz, the N/D367s responds to vocal harmonics with a full and balanced feel. The N/D367s features an on/off switch, durable, rugged construction and a superior multistage shock mount, making it ideal for use in both concert vocal as well as podium or conference table applications.
