ELITE MULTIMEDIA INSTALLS EV® Sx300PI™ LOUDSPEAKERS AT TENNESSEE HIGH SCHOOL STADIUM

Bartlett, TN (June 4th, 2004): The new PA system at Bolton High School in Arlington, TN, represents the state of the art in compact, durable, high-performance audio. Jeremy Byrd, President of design and installation contractors Elite Multimedia (www.elite-multimedia.com) wasn't about to take any chances when it came to specifying the best equipment for this particular project: Byrd himself went to Bolton High, and was determined to provide the school with "the best sounding high-school stadium PA in Tennessee." It would seem he succeeded. Byrd commented:

"The school had an all-horn system prior to this, as many school stadiums do, and was having problems with coverage and intelligibility. It was time for an upgrade. Their old system was about fifteen years old, and they'd certainly got some mileage and value for money out of it. We wanted to provide them with an equally good value system, but in a full-range format, and with all the advantages of EV's latest molded enclosure design. The weatherproof PI edition of the legendary Sx300 does just this, and it sounds fantastic. In fact I would say, without bias, that this is the best high school football stadium system I've ever heard. We've had the new system cranked up with both speech and music playback, and it covers both sides of the field, the concession stands, basically the entire stadium, with room to spare."

Byrd continued: "The speakers are distributed around the stadium in increments of approximately thirty feet. The middle three are positioned at zero degrees. The three on the left side are at ten, twenty and forty-five degrees respectively, facing away from the center. On the opposite side, the last two are at ten and twenty degrees, facing away from the center. The system is powered by two CPS 2.8 power amplifiers We got ideal results with a minimal amount of tuning and tweaking, having done the math on paper beforehand, incorporating the Sx300's 'jack of all trades' performance specifications into our calculations. It's also really satisfying to know that the 'PI' version of these loudspeakers is as durable as it is high-performance. Needless to say, the school is extremely happy with their investment, and they can look forward to years of great sound at their stadium."
