

## NO STATIC INC INSTALL ELECTRO-VOICE® EVIDS™ THROUGHOUT NATIONAL RESTAURANT CHAIN

**Burbank, CA (February 27, 2004):** Audio, video and lighting production and installation specialists No Static ([www.nostatic.tv](http://www.nostatic.tv)) have been busy bringing the inimitable sound and style of Electro-Voice EVID loudspeakers to a hot new national chain of restaurants. Yard House is the name, Classic Rock, great food and the World's largest selection of draft beer is the game. This sounds like a simple formula for a good time – with sound being an essential element of the whole Yard House experience. No Static's Dave Meek described how EVIDs made the grade at the rock-themed restaurants:

*EVID C8.2 ceiling speakers – heard but not seen in stylish surroundings*

“The EVIDs have proven to be perfect for the Yard House restaurants, which are currently located mostly here in Southern California, but are steadily going national. We just built a system in Denver, and one is scheduled to go into the new Chicago location. Though these are bar/restaurants, we install systems to deliver more of a nightclub sound quality. Take the San Diego location: there's an EVID C8.2 ceiling speaker above just about every booth in the place. The owners wanted loud and clean sound - people come here to listen to rock, and the EVIDs don't disappoint – there's none of the tinny sound many people associate with compact speakers. The 8.2s carry a lot

of bass, and are in general a very full sounding speaker. They're also really easy to install and look great - in as much as you can hear them clearly without noticing they're there at all visually. In the private dining areas we used four of the surface-mountable EVID 6.2T speakers. Those are serious speakers for their size, and look great. Outside we used the 3.2s as a compact, weatherproof speaker that could still deliver quality sound. In Denver we used 12 of the 6.2s outside in the patio area - there's an EVID for every application. In Pasadena, for example, we used (26) C8.2s inside and (6) C8.2HCs outside in the patio area up in a high roof space. They sound amazing up there - the coverage and intelligibility are phenomenal. The latest location is in Chicago, scheduled to open in May. We're putting in 20 to 40 speakers at each location, depending on the size. We specified EVIDs for a number of other jobs like this. We're taking out the old sound systems at Flemings, a chain of steakhouses, and replacing them with all EV. Another hot spot for EVIDs is Lucille's Smoke House in Las Vegas, into which we'll be putting no less than 54 speakers! We recommend EVIDs because you simply can't beat them in these kinds of applications, and we know our clients won't be disappointed."
