ELECTRO-VOICE® ANNOUNCES THE LAUNCH OF NEW FULL RACK SPACE DUAL RE-1 UHF WIRELESS RECEIVER SYSTEM

Electro-Voice® and Telex® Blend Technologies to Offer State-of-the-Art Wireless Solutions

ORLANDO, FLORIDA (June 3, 2003): EV (Electro-Voice®) is proud to announce the launch of the new full rack space dual RE-1 UHF wireless receiver system at InfoComm, Booth #534, 635.

Designed for rental houses, sound contractors, professional touring, and other end users who demand dependable frequency agile wireless operation, the new CDR-1000, full rack width dual receiver with integrated internal power supply, is the latest addition to the Electro-Voice® RE-1 UHF wireless microphone system. The CDR-1000 includes all the Electro-Voice RE-1 ½-rack receiver innovations combined with features specially designed for the rigorous demands of rental houses, the professional touring market and large theater productions.

The CDR-1000 includes real time PC monitoring and control through the USB port, a feature previously found only on the most expensive wireless receivers. Additional features include a headphone jack with volume control on the front panel. The CDR-1000's antenna output jacks allow the use of 6 receivers on just two antennas without a separate splitter, and 24 receivers may be integrated to operate from just two antennas and one APD4 antenna distribution splitter. The CDR-1000 also features DC power on the antenna input jacks for operation of the new optional UAA-500 RF antenna amplifier. One other new feature is a switch-able fixed microphone level or adjustable balanced line level XLR audio output.

The CDR-1000 RE-1 UHF Wireless Dual Receiver begins at \$2400 List. RE-1 transmitters are sold separately.
