EV (ELECTRO-VOICE®) REINTRODUCES EV N/D967 CONCERT VOCAL MICROPHONE AT WINTER NAMM

EV N/D967 Dynamic Supercardioid Concert Vocal Microphone Provides Highest Gain-Before-Feedback Performance

Anaheim, CA (January 16, 2003): EV (Electro-Voice®) is proud to announce the reintroduction of the N/D967 Concert Vocal microphone at Winter NAMM, Booth #6778. Due to continued interest and demand from dealers and customers, the N/D967 is being reintroduced at Winter NAMM. Unique to the marketplace as a monitor engineer's favorite because of its remarkable gain-before-feedback and performance in high SPL, the N/D967 is once again available.

When exceptional performance is a must in demanding, high volume, on-stage situations, the N/D967 is the microphone of choice. An extraordinarily tight pick-up pattern, specially tailored frequency response, the highest gain-before-feedback and unrivaled low handling noise make this microphone the ultimate for vocal power and clarity. The N/D967 features an exclusive, low profile grille that puts the performer's voice as close as possible to the microphone element. Thus, the N/D967 picks up more of what the engineer wants – the singer's voice, and less of everything else, from cymbals, stage rumble and vibration, and especially monitors, all combining to minimize feedback while at the same time providing exceptional sound. And for those performances requiring more "cut", an exclusive "personality switch" is provided, giving the artist the confidence to use the full range of their talent in any venue. The N/D967 from Electro-Voice gives you more voice and less of everything else – available from your favorite EV microphone dealer.
