Enclosure Components for the DME-3000 System

Product Data

- **3000-MF8 Mainframe rack cage**
- **3000-SP8 Security panel**
- **3000-OP8 Observation panel**
- **3000-120V Bipolar 12VDC, 300mA power supply**
- **3000-PSA Power supply adapter board**
- **3000-BP1 Single card BussPlate**
- **3000-BP4 Four card BussPlate**
- **3000-BP8 Eight card BussPlate**

The DME-3000 system enclosure components shown in the illustration above provide the most reliable and convenient way to access all of the features of the DME-3000 cards. The minimum system requires using the 3000-MF8 mainframe, at least one BussPlate™, and the 3000-120V power supply. Unless the 3000-BP8 eight-card BussPlate is used, the 3000-PSA must also be used to connect the 3000-120V power supply to the 3000-BP4 four-card or 3000-BP1 single-card BussPlate. For installations that use only a few DME-3000 cards but may require future expansion, the 3000-BP1 and 3000-BP4 have the ability to link together to provide additional card slots. The 3000-SP8 black security panel and the 3000-OP8 smoked observation panel are optional items that cover the front of the 3000-MF8 cage to prevent tampering with the cards.
